Figure 1 consists of two scatter plots. The left plot shows a positive correlation between the number of children and the number of children in the household. The right plot shows a negative correlation between the number of children and the number of children in the household.

Figure 1 is a line graph illustrating the percentage of the total sample for various age groups across different years. The y-axis represents the percentage of the total sample, ranging from 0 to 100. The x-axis represents the years, with labels for 1980, 1990, 2000, 2010, and 2020. The age groups are represented by different line styles and markers: 0-14 (solid line with circles), 15-24 (dashed line with squares), 25-34 (solid line with triangles), 35-44 (dashed line with diamonds), 45-54 (solid line with crosses), 55-64 (dashed line with asterisks), 65-74 (solid line with pluses), and 75+ (dashed line with hash marks). The graph shows a clear trend of aging over time, with the 0-14 age group decreasing from approximately 25% in 1980 to 10% in 2020, and the 65-74 age group increasing from approximately 15% in 1980 to 35% in 2020.

LOG. NOS.

90124 —

90622

A useful guide in rewriting the observations may be found under WEATHER REPORTS (lower half of left hand page), where the messages are written out in coded form - however errors can occur so do not necessarily accept them as correct.

A running total of the number of observations scrutinised is written at the bottom of each page and the grand total is then entered in the space provided on the front cover.

After Scrutiny of Logbook is completed initial and add date in the appropriate space on the front cover.

15.12.64 of books herein listed some 150 not punched.

As scrutiny of book is completed enter 'S' in remarks column of this register alongside ship's number.

Similarly when checked enter 'C'.

F - Indicates papers removed from logbook & kept in separate folder.

P + in red date sent: in blue date returned.

(OMIT Exercise Areas shown on red lines)

* All vls. returning Ad. logbooks have anemometers for measuring the wind speed, to show this is done an X overpunch is necessary over first figure of wind direction. (1/1/61 to 31/12/67)

NOTE UP to 30/6/56 (Series 9 cards) Beaufort Force was punched Not wind speed in knots - since that date the reverse has been done. This means that up to 30/6/56 in Admiralty records the Beaufort Force given was obtained by converting the observed wind speed (in knots) by reference to the appropriate table in use at the time.
